accuracy possible. Fouling can degrade accuracy in this rifle more noticeably than in, for example, a 1911 pistol or an AR-15, so the best accuracy is obtained from a clean bore. With that in mind, I punched the bore after every ten rounds using the Cleenbore SACS cleaning system with Firepower FP-10™ lubricant cleaner. (See the report on this cleaning system in *Off Beat*.)

Firing was performed at one hundred yards from the prone position (using the Harris bipod) and the braced kneeling position.

The first ten round group impacted roughly one and one-half inches to the right of the black square on the sight-in target, with one called flyer an inch out of the group at one o'clock. Six clicks left on the Leupold 3.5-10x40mm LR M1 had me shooting dead on and tearing the center out of the black square from prone.

Results from the less stable braced kneeling position were not quite as impressive, but I still managed to fire groups that were right at or slightly over one-inch, measured center to
